From the President's Desk...

If you have received *Action News* for any length of time, you know my monthly message is often focused on the importance of sponsoring to build a successful AMSOIL business. If you are serious about achieving the maximum potential your business has to offer, sponsoring should definitely be one of your top priorities.

There are many ways to earn money in this business. We provide programs for retail on-the-shelf sales, quick-lube retail sales, commercial sales, Internet sales, catalog sales and Preferred Customer sales in addition to the personal sales you make one-on-one to your customers. These programs are all part of our marketing plan, and they will all generate profits for your business. With so many options, new Dealers might be uncertain where to concentrate their efforts. From my experience, the best way to build volume and earn money in this business is with a personally sponsored downline group.

Why do I say that? Because one individual can only accomplish so much. In the long run, most Dealers will earn more money managing and working with downline Dealers than relying solely on their own sales. You can accomplish much the same thing by signing up and servicing retail and commercial accounts, but a large motivated downline sales group will nearly always be more productive.

It can be easier, as well. Relying on your personal sales to achieve higher levels of income will be very time consuming. But if you have a downline group and hold training meetings for your Dealers, they come to you rather than you having to make many separate sales and service calls. You are able to meet with a group of Dealers at a time rather than individual customers or accounts. Every sale your downline group makes generates earnings for you as well as for them, making it well worth your while working with them to insure their success. When you help them succeed,

they help you succeed. That's the way this business works.

There is another important benefit in having a downline group that most Dealers don't take into consideration until they need it. If you become ill or have a bad week, month, or even year, your business continues to generate income through the sales activity of your downline group. They take up the slack, many times actually increasing volume when you least expect it. There have been Direct Jobbers who have become ill and were basically unable to work who have told me how wonderful it was to have the checks from AMSOIL keep coming during their illness. Their downline group was coming through for them.

As you build your business, you are also building equity that you someday may want to cash in on. A business built around the efforts and sales of one or two individuals will not have the same value as a business supported by a large downline group. That's because no matter how good or talented one Dealer is, he or she cannot possibly outproduce an active, motivated group, and potential buyers know that.

If your business is built around one or two large accounts, such as a large commercial or retail account, you could be at risk. Without those accounts, your business would definitely be adversely affected. That is another reason to expand your sales base with a strong downline group. You broaden your base, minimize your risks, and build value in your business.

Your AMSOIL business is a valuable asset. It is like an insurance policy in some respects, except instead of having to pay into it every month, it pays you. I don't know of any insurance policy that would do that unless you invested a fortune into it up front! An AMSOIL business requires very little investment other than your time and effort. The more time you invest, the more you grow.

As I mentioned at the outset, there are many opportunities to profit from your AMSOIL business. They all work, and they all produce income. But it's important to remember that the higher the number of active Dealers you have in your group, the more income you are bound to generate every month. Obviously, the same will hold true if you have a high number of retail accounts, commercial accounts, and generate a great deal of personal volume through catalog sales, Internet sales, etc. The point is, you will work harder as an individual to maintain a good income from your business than you would with an active downline group.

Every business is a numbers game, and your AMSOIL business is no exception. The more Dealers, accounts, catalog and Preferred Customers you have, the more sales you will generate and the greater your income will be. You control your own destiny in this regard. Your business will always reward you in direct proportion to the time and effort you devote to it. Work it smart and build your numbers. Sponsor and grow!

DEALERS IN ACTION!

AMSOIL Quality Beats Competitor, Earns New Customer

AMSOIL Preferred Customer Mark Tweedale, Neenah, Wis., learned about the quality and cost savings he can depend on with AMSOIL Series 2000 2-Cycle Synthetic Racing Oil after a hard lesson using Pennzoil-Quaker State oil in his watercrafts.

The watercrafts are stock Kawasaki Ultra 150s, bought new in 1999 and 2000. They have a triple cylinder 1200cc motor that puts out 145 horsepower with a top radar speed of 65 mph.

"They are Kawasaki's top of the line muscle crafts," Tweedale said.

The machines use a race spark plug that costs "a whopping \$15 each," Tweedale said. "I began fouling plugs almost immediately into their use."

In fact, he fouled out 30 plugs in the first year. He took the watercrafts back to the dealer to try to identify the source of the problem. "The dealer found nothing mechanically wrong with my watercrafts," Tweedale said. The dealer told Tweedale none of his other Ultras had experienced this plug fouling problem.

Tweedale began to suspect his oil and he contacted Pennzoil-Quaker State about the problem, explained the expense of the plugs and that the machines were mechanically sound. "I asked them for help and possible reimbursement for my plugs," Tweedale said.

Pennzoil-Quaker State sent a letter requesting Tweedale send in some of his oil for analysis. After the oil had been analyzed, Tweedale received a letter from

the oil company stating that, while the oil's additives showed signs of breakdown from aging, it was not to the extent that it would foul plugs in his watercraft. "They offered me no reimbursement toward my plug expense," Tweedale said. They did offer him a gallon of their synthetic oil.

While talking with coworkers, he discovered Gary Yashinsky, an AMSOIL Preferred Customer in Green Bay, Wis. Yashinsky "had only positive things to say about AMSOIL," Tweedale said. "He truly went the extra mile to help me solve my problem and also to promote AMSOIL."

Tweedale was convinced.

He had the Series 2000 Racing Oil installed in the watercraft early in the spring of 2002.

"I went the entire summer with no fouled plugs in either watercraft," Tweedale said. "Unbelievable. What a difference oil can make."

He became a Preferred Customer and does everything he can to promote AMSOIL products to his friends and coworkers. "I will be an AMSOIL Preferred Customer forever," he said. "Thank you AMSOIL for putting out a quality product which in turn solved this problem for me."

He does most of his watercrafting in Lake Superior, the world's largest freshwater lake. Generally, Tweedale starts his trips on the big lake at Munising Bay. He plans this summer to complete a ride started last year with his friend Todd Olson of Gwinn, Mich., that traverses the shoreline along the entire Upper Peninsula. "We completed half of it last summer and simply ran out of nice weather," he said. "It's one cold lake and can get downright violent at times. That's what makes it a challenge."

This year, the trip takes them from Little Girls Point north of Ironwood, Mich., around the peninsula and back to Houghton; the final leg covering the distance from Grand Marais to Sault Ste. Marie.

When their journey is over this year, the two—along with Olson's wife, Gina Olson, and Tweedale's fiancée, Kristi Krajewski, who will join them at different stages along the coast—will cover nearly 400 miles. That's in addition to a nearly 200-mile trip last year. They plan the trip in stages because the lake takes its toll on their bodies.

"We move on as soon as our bodies and muscles recover from the pounding of the first (stage)," he said. "We tend to get beat up a little bit out there on (Lake) Superior. North winds are bad."

SUMMER FUN IN LAKE SUPERIOR – AMSOIL Preferred Customer Mark Tweedale with his daughter, Paige, under a waterfall at Grand Island on Lake Superior.

Harley-Davidson Shifts Gears

The recent introduction of Screamin' Eagle® Synthetic Lubricant by Harley-Davidson® indicates the Motor Company has finally recognized the benefits of running synthetic motorcycle oil in their air-cooled engines. After years of advising dealers and customers to avoid using synthetic oils in their bikes, it's natural to wonder why the company is suddenly marketing one.

For the past 20 years, Harley-Davidson® has claimed its petroleum-based Genuine H-D Oil is best for the "unique requirements of Harley-Davidson® air-cooled V-twin engines." However, laboratory testing has consistently revealed that Genuine H-D Oil does not provide the best protection possible for Harley-Davidson® engines. In fact, Four-Ball Wear Tests show Harley-Davidson® 20W-50 Motorcycle Oil leaves a wear scar over 50 percent larger than that left by AMSOIL Synthetic 20W-50 Motorcycle Oil.

One of the major benefits of running a synthetic motorcycle oil is its resistance to oxidation and thermal degradation, which inhibit the formation of sludge and deposits that contribute to increased wear. In the past, Harley-Davidson® has defended use of its Genuine H-

D Oil by arguing that oil breakdown in extreme heat is a non-issue because extreme heat conditions are not normally faced by motorcycle engines, while the superior cold-temperature benefits of synthetics also don't apply to Harleys.

The fact is, engine oil in Harley-Davidson® motorcycles is subject to very high temperatures. Being air-cooled, Harley-Davidson® engines get especially hot while idling in traffic, commonly reaching temperatures up to 240 degrees Fahrenheit. As heat and oxidation increase, so does viscosity, adversely affecting the lubricating qualities of the oil and increasing wear.

The water, soot and acid byproducts of combustion also contribute to deposit formation. Harley-Davidson® has stressed the importance of regular oil changes in order to remove these contaminants. Of course, promoting regular oil changes is also a good way to promote using petroleum-based Genuine H-D Oil. High-quality synthetic oils formulated with high-performance additives effectively withstand such contaminants, allowing motorcyclists to safely extend drain intervals.

In support of their about-face and the introduction of a synthetic oil, Harley maintains that "the Motor Company has never supported the use of synthetic products in our vehicles because there has never been any test validations completed on the numerous formulations in HD/Buell motorcycles. This product has been exclusively designed for Harley-Davidson® and is the only synthetic product TESTED and CERTIFIED by Harley-Davidson® engineering for use in HD/Buell motorcycles."

Although this is necessary marketing hype, Harley-Davidson® V-twin air-cooled engines are not unique in their lubrication requirements and do not require a special Harley-only fluid. There is nothing about Screamin' Eagle® Synthetic Motorcycle Oil that sets it apart from, or makes it better than, many other synthetic motorcycle oil formulations, except that Harley-Davidson® is marketing it and directly profiting from the sales.

According to Harley-Davidson®, one of the unique benefits offered by Screamin' Eagle® Synthetic Motorcycle Oil is its versatility. For the first time the company is recommending an oil that can be used in the engines, primary chaincases and transmissions of most Harley-Davidson® motorcycles, including Evolution XL, Evolution 1340, Twin Cam 88 and 88B, Revolution and Buell models. This feature, however, is not unique. AMSOIL 20W-50 Synthetic Motorcycle Oil may also be used in the engines, primary chaincases and transmissions of these applications, providing superior lubricating protection in each component.

How does Screamin' Eagle® Synthetic Motorcycle Oil measure up to AMSOIL in wear protection? Four-Ball

The smaller the wear scar, the better the protection!

Four-Ball Wear Test (ASTM D4172), 40 kg pressure @ 150 degrees C, 1800 rpm for 1 hour duration
April 2003 test results

The Four-Ball Wear Test is the industry's standard test method for measuring the wear preventive characteristics of a lubricant. Placed in a bath of the test lubricant, three fixed steel balls are put into contact with a fourth ball in rotating contact at preset test conditions. Lubricant wear protection properties are measured by comparing the average wear scars on the three fixed balls. The smaller the average wear scar, the better the protection.

on Synthetic Motorcycle Oil

Wear Test results indicate that AMSOIL Synthetic Motorcycle Oil still provides the best protection possible for motorcycles. In fact, Screamin' Eagle® Synthetic Motorcycle Oil leaves a wear scar nearly 80 percent larger than AMSOIL 20W-50 Synthetic Motorcycle Oil.

Not only does AMSOIL Synthetic Motorcycle Oil offer greater wear protection than Screamin' Eagle® Synthetic Motorcycle Oil, it also delivers greater value. Suggested retail price of Screamin' Eagle® is nearly \$2 a quart higher than AMSOIL 20W-50 Motorcycle Oil. And because AMSOIL Synthetic Motorcycle Oil may be used for extended drain intervals of up to twice the manufacturer's suggested interval, while Screamin' Eagle® is recommended for standard drain intervals, AMSOIL customers realize additional savings.

Harley-Davidson® claims Screamin' Eagle® Synthetic Motorcycle Oil has been "exclusively designed" for use in their motorcycles, pointing to extensive bench testing and over 230,000 miles of durability testing to back it up. AMSOIL INC. has 30 years of experience providing superior lubricating protection for all brands of

motorcycles, and AMSOIL Synthetic Motorcycle Oils have been tested in millions of over-the-road miles. Testimonials from countless motorcyclists further demonstrate the superiority of AMSOIL Synthetic Motorcycle Oils.

Formulated with top-of-the-line synthetic base stocks and high-temperature deposit control additives, AMSOIL Synthetic Motorcycle Oils provide superior protection and performance for motorcycles in all operating conditions. AMSOIL Motorcycle Oils effectively withstand oxidation and thermal degradation, keep wear to an absolute minimum, hold contaminants in suspension and keep engines running cool and clean.

AMSOIL Synthetic Motorcycle Oils

- *Reduce operating temperatures*
- *Keep engines clean and deposit-free*
- *Provide maximum protection against wear*
- *Formulated without friction modifiers for smooth performance*
- *Saves money with extended drain intervals of up to two times the manufacturers' recommendations*

New Technology Places High Demands on Fluids

The use of automatic transmissions can be found in virtually every transportation and mobile application. The design of the equipment varies, and so do the demands placed on lubricants. The automatic automotive transmission has come from a novelty introduced in 1940 by Oldsmobile (sold with what they called the new Hydra-Matic Drive to make driving easier for women) to a highly sophisticated piece of computer-controlled electronic equipment. Transmissions used to be governed by hydraulic oil pressure and engine vacuum, but those designs have been discarded over the years to incorporate newer technology with less room for mechanical (and human) error.

What's New in Transmission Technology?

Today's transmissions are governed electronically through engine control. For instance, if your car's performance system senses that a heavy load has been placed on the transmission for any reason (i.e., passing a car, additional payload, pulling a trailer, or driving up a hill) a signal is sent to the transmission to downshift into a lower gear. Transmission operation is governed through speed sensors and solenoids and controlled through electronic valve bodies, solenoid packs and lockup torque converters. These systems can blur the distinction between engine driveability problems and those caused by a malfunctioning transmission. There's also more communication and interaction between the ABS/traction control system and powertrain control module (PCM), which further blurs the cause of a Check Engine or Malfunction Indicator Lamp being on.

How Transmission Components Interact

When a gear is selected, oil (or transmission fluid) is routed under pressure (created by its internal pump) through the valve body. The valve body (or brain of the transmission) is electronically and hydraulically controlled. Oil is then forced through the torque converter at high pressure, creating a fluid coupling between the engine and transmission. This fluid coupling is similar to what happens when the clutch is applied on a standard transmission. Just as the clutch connects the engine to the transmission, so does the torque converter through a fluid coupling. This fluid coupling is achieved by forcing the transmission fluid through a series of restrictive passages called fins (very similar in design to turbine engines on a jet).

Bringing It All Together to Create Motion

Now that there is a fluid linkup, how do we accelerate forward and shift gears? The gears are applied by a series of mechanisms called servos and bands; engine electronics and hydraulic pressure control the application of these. For example, when the gas is depressed, the ECM (engine control module) sees the need to shift, so an electronic signal is sent to the transmission to downshift into passing gear. Electrical switches called

solenoids are then tripped, valves within the valve body divert the flow of oil to the bands or servos, which in turn apply or disengage gears. Just like magic—the transmission shifts. For all this to happen in perfect harmony, there must be smooth oil flow, strong calibrated oil pressure and properly functioning engine controls.

Common Transmission Problems

Take away any of these conditions and problems start to appear in the form of transmission malfunction. For instance, if the electronic engine controls malfunction, incorrect signals are sent to the transmission causing it to shift erratically. Or, if the flow of oil is inhibited due to a clogged filter or other malfunction, the transmission can "drop out" of gear into neutral due to low internal oil pressure. Dirt flowing through the system can cause valves in the valve body to stick, which will cause the transmission to get stuck in a particular gear and resist shifting. The loss of strong, calibrated oil flow due to a worn internal pump or a stuck pressure regulator valve can cause all of the above. And of course extreme high temperatures, such as are found in heavy towing conditions, can cause a wide variety of problems such as metal-to-metal fusing, stress breakage and sludging.

Tips to maximize transmission life:

1. Keep your engine tuned. Poorly running engines can push the transmission to extremes trying to carry out commands from a diseased electronic engine control system.
2. Have drivetrain components such as propeller shafts, CV joints, universal joints, and transmission mounts checked and maintained on a regular basis.
3. If using a conventional transmission fluid, follow the manufacturer's maintenance schedule for the transmission fluid and filter change (the rule of thumb is every 25,000 miles). AMSOIL ATF can be used up to three times longer than conventional ATF.

AMSOIL Synthetic Automatic Transmission Fluid helps transmissions run cooler, shift smoother and last longer.

AMSOIL 30th Anniversary Collectables

Back of Glass Design

Anniversary Watches

Matching men's and women's watches feature AMSOIL 30th Anniversary logo captured on a 3-D custom medallion watch face and protected behind a scratch-resistant

mineral glass crystal. Premiere quartz movement and adjustable stainless steel bracelets. Packaged in a reusable round gift box.

Stock #	Description	U.S.	Can.
G-1886	Men's Watch	35.00	56.75
G-1887	Women's Watch	35.00	56.75

Anniversary Storybook Crystal

Limited Edition AMSOIL 30th Anniversary Storybook Crystal Glasses powerfully, poignantly and permanently tell the AMSOIL story in a set of four beautifully etched crystal glasses. Glasses and corresponding story are incorporated into a hardbound storybook presentation box. Each 14 oz. glass features its own unique design with the AMSOIL 30th Anniversary logo etched on the back.

Stock #	U.S.	Can.
G-1850	69.00	112.50

Anniversary Clock

The ideal gift or desk accessory, this stylish, sophisticated and solid 30th Anniversary Artisan Clock (3"x2.5"x1") from Leed's is constructed of heavy matte silver over alloy graphite. The AMSOIL 30th Anniversary

is commemorated with a tasteful laser engraving on the face of the clock.

Stock #	U.S.	Can.
G-1888	20.00	32.50

Anniversary Cap & Visor

White six-panel cap proudly displays AMSOIL 30th Anniversary logo and includes preformed visor with patriotic flag peak and buckle closure.

White visor features 30th Anniversary logo, preformed visor with blue peak and velcro closure.

Stock #	Description	U.S.	Can.

6:30 p.m. – President's Awards Dinner and Dance

Sunday, July 20:

8 a.m. – product pickup

Noon-3 p.m. – plant tours

Ten reasons to attend the 30th Anniversary Convention

Education

Gather valuable information from corporate staff, Dealers and industry leaders to help you grow your business and increase your income.

Recreation

Enjoy the sights, great food, hospitality and many attractions offered in the Duluth/Superior area along the shores of Lake Superior, the world's largest freshwater lake.

Inspiration

Meet AMSOIL President A.J. Amatuzio, the man who started it all.

Rejuvenation

The enthusiasm shared with other Dealers will leave you energized,

ready to jump-start your business and get serious about making money.

Compensation

All Dealers have the chance to win a new Dell computer preloaded with the AMSWIN software package; new AMSOIL trade show display units; new TV/VCR units; free Yellow Page advertising, AND MUCH MORE...

Capitalization

Take advantage of money-saving opportunities. A 10% rebate will be given on all product orders placed at the convention.

Association

See old friends. Share your expertise with those you've known for years

and meet new friends who are learning what has become a time-tested business plan.

Dedication

Be a leader. Set an example for your downline Dealers.

Confirmation

Visit corporate headquarters and tour the plant facilities. See firsthand the tremendous investment AMSOIL has made for you and your future.

Conversation

Meet corporate management and staff members. See the people you speak to on the phone – the people who assist you in the day-to-day operation of your AMSOIL business.

AMSOIL Completes One of the Best Snowmobile Racing Seasons Ever

Snocross Sponsorship Provides National Exposure

The benefits of sponsoring a snocross team are often subtle, like the conversion to AMSOIL lubricants by teams simply through word of mouth. Teams learn quickly on the circuit what other teams, and winners, are using. AMSOIL Series 2000 2-Cycle Oil has become the lubricant of choice. It's also about the relationships developed between AMSOIL and other sponsors. There's a great exchange of ideas and expertise that goes on among sponsors.

Benefits can be more tangible too. Pick up most any snowmobile magazine or motosports publication that covers snocross and you'll see something about Team AMSOIL. The familiar black sleds are exposed on the pages of publications like *SnoX*, *Race Gas* and *Snow Week* in practically every issue and this, in turn, increases AMSOIL name recognition all over the country. Flip through, and you'll see usually multiple advertisements showing Team AMSOIL in competition or on the winner's podium. If you watch any snocross competition on the ESPN networks, you'll see a large portion of time dedicated to the coverage of Team AMSOIL. An open door policy by team owner Steve Scheuring allows reporters and photographers to come and go freely. Media members know this access allows for great pictures and straight answers. This policy has led to numerous feature stories and increased race coverage.

It all starts with the team. AMSOIL, Polaris and Scheuring have created a potent combination. A team still has to be out front to get noticed. The key has been staying competitive and winning. Of the 10 rounds on the World Snowmobile Association schedule, the AMSOIL team put a driver on the podium seven times. Six of those finishes were in the highly competitive and

ESPN interviews Justin Tate.

coveted Open class. Before suffering a serious knee injury, DJ Eckstrom had three top-three finishes in the first four races. Justin Tate picked up for his fallen partner and ended the season with four podiums in the last five events. Ross Martin was brought on to ride for Eckstrom and he, too, contributed with dramatic racing. Tate and Eckstrom shined at the 2003 Winter X Games. Eckstrom earned a silver medal.

The "proof is in the pudding" as they say with regards to benefits of sponsorship. AMSOIL is now a

sponsor of the Big East Snocross Tour and the Rock Maple Racing Association. Dealers in the regions report terrific exposure and increased sales. In fact, sales of AMSOIL 2-Cycle Oil have steadily increased during the period in which AMSOIL has been in snocross racing. The growth isn't accidental. Snowmobile racing has played a tremendous role in the conquering of the snowmobile market in the U.S.

Team AMSOIL is a media favorite.

Villeneuve Finishes Second in Oval Championships

Jacques Villeneuve is regarded as one of the best oval ice racers in North America. The veteran Canadian driver is a former world champion. At each event of the Eastern Pro Tour Championship, you'll find his AMSOIL/SkiDoo team near the top, bidding for another title.

Oval ice racing is terribly demanding on man and machine. As drivers lean into turns at tremendous speeds, great stress is put on the snowmobiles. Villeneuve finished the 2003 season second in Eastern Pro Tour standings. He had seven podium results on the year.

Jacques Villeneuve is a racing legend and AMSOIL user.

Garden Tractors to Go-Karts - Quamme Family Not in Quandry Over Best Lubricants

AMSOIL makes this Go-Kart goooo.

There are some people that mow and others that want mo' better from their garden tractors. The Quamme family mixes a little "Horse Play" with serious competition. Kyle Quamme is about to start his sixth year of tractor pulling. The 14-year-old from Rosemount, Minn., tied last season for the National Garden Tractor Pulling Association Northern Region Stock Championship and was fourth in the Gopher State Garden Tractor Pullers Association 950 lb and 1050 lb classes.

His father, Dale Quamme, reports the entire tractor is AMSOIL-equipped, including the engine, transaxle and greasable joints. Quamme says the tractor is never short of power. "In many cases on a hot, summer day the cylinder head temperature will exceed 425 degrees F," said Quamme, "and no other oil but AMSOIL Series 2000 0W-

30 Synthetic could hold up under those conditions."

The team depends on AMSOIL products for their 1996 Ford Crew Cab too. At 73,000 miles the truck's 215 hp Powerstroke diesel engine was converted to Series 3000 5W-30 Heavy Duty Diesel Oil, AMSOIL Synthetic ATF was put in the transmission, and the differentials were filled with Series 2000 Synthetic Gear Lube. "Our fuel economy while towing increased one mile per gallon conservatively and jumped 20 mpg without pulling the trailer," said Quamme.

AMSOIL Dealers John and Thelma Wagner, of Lebanon, Mo. have supported the Quamme family and team for several seasons. If their schedule permits, the Quamme team will pull into Duluth, Minn. for the 30th Anniversary Convention.

Quamme Enterprises pulls in championships using AMSOIL products.

AMSOIL at 300 m.p.h. - Built for Speed

Imagine driving a car at speeds in excess of 300 mph while flat on your back. You attempt to control a rocket 28-foot long, 27-inch wide and only 23-inch high rocket down a baked salt track with your heart in your throat. Jack Costella is the designer, builder, owner and driver of the futuristic-looking "Costella Special" Nebulous Theorum 3. He's the holder of several world speed records earned on dry lake beds and the famous Bonneville Salt Flats.

Costella defies conventional wisdom. He has no formal education in engineering, still he's intuitive about what makes his land-torpedo fly. The San Jose, Calif. resident can't afford an engine failure at nearly five times the highway speed of most passenger cars and only inches above the ground. He counts on the high performance of AMSOIL synthetic lubricants like the Series 2000 20W-50 Racing Oil and Supershift Transmission Fluid. Direct Jobber Larry Gray, of San Jose, has worked closely with Costella for many years.

Costella was fascinated with cars and speed as a teen. He was learning a trade in carpentry when he discovered the pliability, flexibility and possibilities that fiberglass presented. When he realized that the marriage of motors and malleable fiberglass could lead to speed,

a life-long passion began. He started setting records and the racing community on its ear in the '60s with dragsters. In 1969 he made his first trip to historic Bonneville. There he witnessed the larger-than-life heroics of legend Craig Breedlove and the death of Bob Herda... and left with his first two records.

The Nebulous Theorum streamliner, with its orange crush color and teardrop design, was unveiled in the late '80s. Its first runs were less than memorable, but through trial and error Costella discovered the right combinations and components, and AMSOIL. The latest version of the car has a 5-liter Chevy V-8 engine. Its official top speed to date is 313.568 mph.

Costella plans to return to Bonneville and set more records, but he has no plans of ever switching lubricants.

Costella Special

T-1 CERTIFICATION MEETINGS
